The Cloud Value Rocket

Details on <https://blog.maxjahn.at/category/cloud-value/>

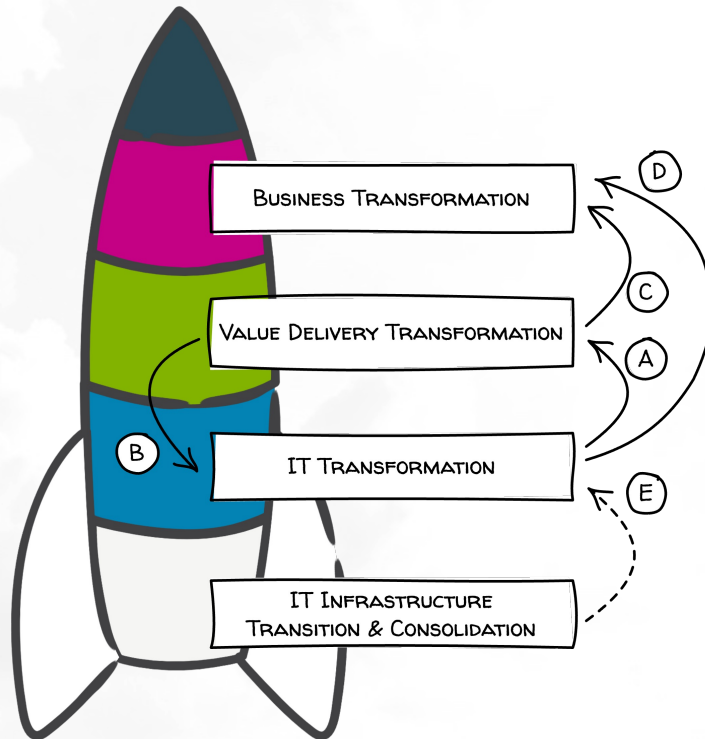

Cloud Value Levers

LEVERS

↑ Increase Value
↓ Reduce Cost

Transformations

A

Agile and flexible IT supports new ways of delivering value in a lean and agile way. You can't create short feedback loops for new products without an IT estate supporting that.

B

Agile and lean processes support a flexible and agile way of running an IT estate based on cloud. Many benefits of cloud rely on a way of thinking that support the ideas DevOps, SRE and Platform Engineering, e.g. accepting that manual steps often do not add quality to a task.

C

The transformation of fundamental parts of a business goes hand in hand with changing the way of working and embracing the change that lies ahead. Experimentation and establishing feedback loops on a business level needs a sound framework for value delivery.

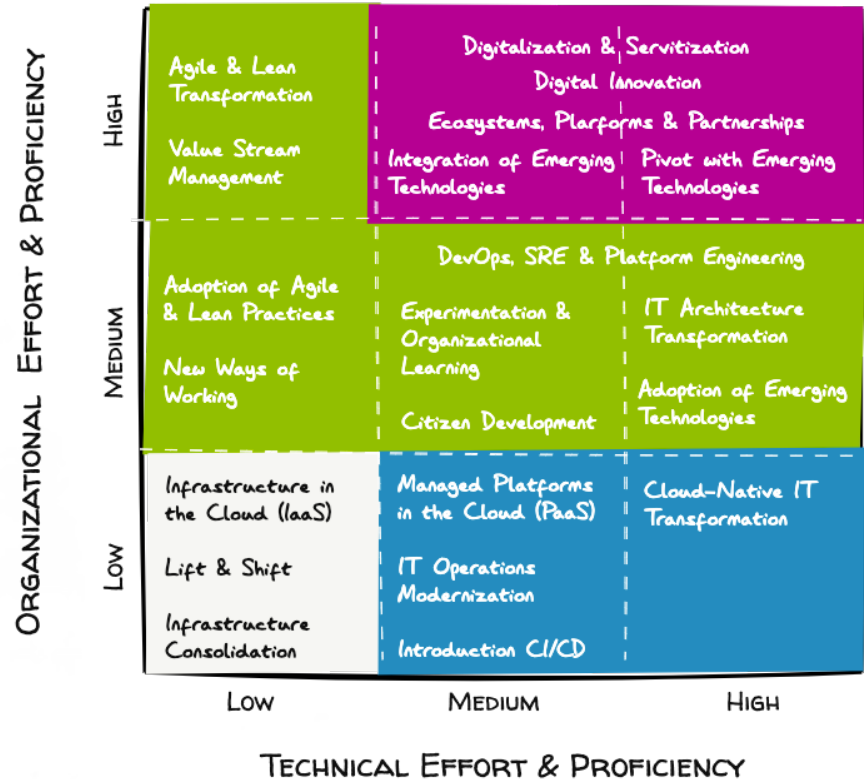

D

Cloud services enable exploration of new, emerging technologies that have an impact of the business model. Think of delivering a solution as SaaS, enabling new customer services based on analytics and IoT or adding the latest AI technologies to your portfolio.

E

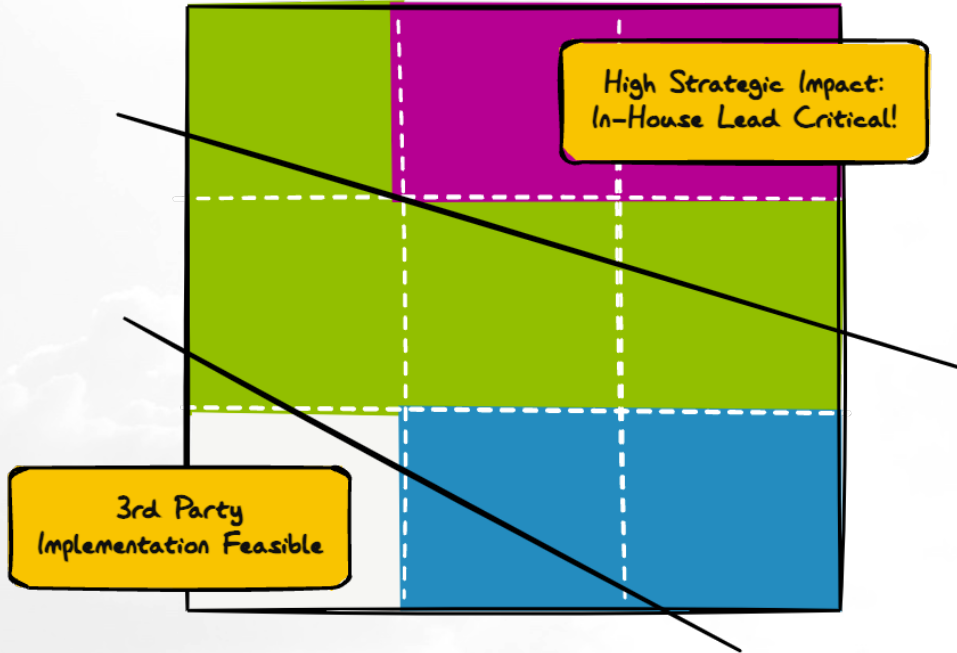

The transition from on-premises to IaaS can serve as an initial step to break dependencies and enable easier transformation of IT.

Cloud Levers & Organizational Capabilities
